

# **SEMESTER 8**

**INFORMATION TECHNOLOGY**

**SEMESTER S8**  
**BIOINFORMATICS**

|                                        |                 |                    |                |
|----------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                     | <b>PEITT861</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week (L: T:P: R)</b> | 3:0:0:0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                         | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>          | None            | <b>Course Type</b> | Theory         |

**Course Objectives:**

1. Students should be able to grasp the foundational principles of molecular biology to effectively navigate and utilize them in research and analysis.
2. To equip students with a range of computational tools and algorithms to perform pairwise and multiple sequence alignments, and construct phylogenetic trees, enabling the identification of evolutionary relationships and genetic variations.
3. Students will be able to utilize statistical and computational algorithms to predict the secondary structures of proteins and RNA, aiding in the understanding of their functions and interactions in biological systems.

**SYLLABUS**

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                     | <b>Contact Hours</b> |
|-------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | <b>Introduction to Bioinformatics</b> – scope, elementary tasks in bioinformatics, Molecular biology basics - human genome organization, central dogma, DNA and RNA structure, Genetic codes, Datatypes - Gene expression data, Micro Arrays, NGS, Pathways, molecular interactions, Biological Databases - Types of databases, Sequence databases – GenBank, DDBJ, EMBL, Entrez, Unigene, Protein sequence databases – SwissProt, UniProt, PDB | <b>9</b>             |
| <b>2</b>          | <b>Sequence Alignment</b> – local and global alignment, similarity vs homology, dot matrices and hash coding, FASTA files, Algorithms for pairwise sequence alignment – Needleman and Wunsch, Scoring Matrices – basic concepts, BLAST and its variants, Multiple Sequence Alignment – Goals, scoring, substitution matrices, PAM and BLOSUM, gap penalties, CLUSTAL and its variants                                                           | <b>9</b>             |

|          |                                                                                                                                                                                                                                                                                                                                    |          |
|----------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|
| <b>3</b> | Phylogenetic trees, Topologies, Distance matrix based and Character based tree construction, Algorithms for Phylogenetic tree construction – UPGMA, Neighbor-Joining, Maximum Parsimony, Pattern representations – deterministic and probabilistic patterns, algorithms for pattern discovery – HMM, gene discovery using GeneMark | <b>9</b> |
| <b>4</b> | <b>Introduction to Protein structures</b> – primary, secondary and tertiary, measures of prediction accuracy, statistical algorithms for protein secondary structure prediction – Chou-Fasman, Protein Folding – Lattice models, algorithms for predicting RNA secondary structure – Nussinov algorithm                            | <b>9</b> |

**Course Assessment Method**  
(CIE: 40 marks, ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| <b>Attendance</b> | <b>Assignment/<br/>Micro project</b> | <b>Internal<br/>Examination-1<br/>(Written)</b> | <b>Internal Examination-<br/>2<br/>(Written)</b> | <b>Total</b> |
|-------------------|--------------------------------------|-------------------------------------------------|--------------------------------------------------|--------------|
| <b>5</b>          | <b>15</b>                            | <b>10</b>                                       | <b>10</b>                                        | <b>40</b>    |

**End Semester Examination Marks (ESE):**

In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions

| <b>Part A</b>                                                                                                                                                         | <b>Part B</b>                                                                                                                                                                                                                                                                          | <b>Total</b> |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| <ul style="list-style-type: none"> <li>• 2 Questions from each module.</li> <li>• Total of 8 Questions, each carrying 3 marks</li> </ul> <p><b>(8x3 =24marks)</b></p> | <ul style="list-style-type: none"> <li>• Each question carries 9 marks.</li> <li>• Two questions will be given from each module, out of which 1 question should be answered.</li> <li>• Each question can have a maximum of 3 sub divisions.</li> </ul> <p><b>(4x9 = 36 marks)</b></p> | <b>60</b>    |

## Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                                                                         | Bloom's Knowledge Level (KL) |
|----------------|-------------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>CO1</b>     | Explain basic concepts in molecular biology and familiarize various biological datatypes and databases                  | <b>K2</b>                    |
| <b>CO2</b>     | Discuss various algorithms and tools for performing pairwise and multiple sequence alignment                            | <b>K2</b>                    |
| <b>CO3</b>     | Apply various algorithms for the construction of phylogenetic trees and familiarize basic algorithms for gene discovery | <b>K3</b>                    |
| <b>CO4</b>     | Apply various statistical algorithms for predicting protein and RNA secondary structure                                 | <b>K3</b>                    |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

### CO-PO Mapping Table (Mapping of Course Outcomes to Program Outcomes)

|            | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |
|------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|

## SEMESTER S7

### SOFTWARE TESTING

|                                        |                                |                    |                |
|----------------------------------------|--------------------------------|--------------------|----------------|
| <b>Course Code</b>                     | <b>PEITT862</b>                | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week (L: T:P: R)</b> | 3:0:0:0                        | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                         | 3                              | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>          | PCITT503: Software Engineering | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. To provide students with foundational knowledge of essential software testing techniques, including unit testing, boundary value testing, equivalence class testing, and decision table-based testing.
2. To introduce students to life cycle-based and agile testing methodologies to ensure software quality throughout various stages of development and learn about test management, planning, and the use of automated testing tools.
3. To equip students with the skills to apply system testing and object-oriented testing techniques to identify and resolve software defects.
4. To foster Test-Driven Development Practices: Encourage students to adopt test-driven development to produce reliable and maintainable software solutions.

#### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                      | <b>Contact Hours</b> |
|-------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | Introduction- Software Testing Terminology- STLC-Software Testing Methodology- Verification and Validation Activities-Verification – Verification of Requirements- Verification of High level Design- Verification of Low level Design - How to verify Code- Validation, Functional testing, Non Functional Testing, SDLC and STLC relationship. | <b>9</b>             |
| <b>2</b>          | Testing Techniques: Dynamic Testing: Black Box Testing, Dynamic Testing: White Box Testing, Static Testing, Validation Activities, Regression Testing, Unit Testing, Integration Testing, Sanity Testing, Smoke Testing,                                                                                                                         | <b>9</b>             |

|          |                                                                                                                                                                                                                                                 |          |

| <b>3</b> | Managing The Test Process: Test Management, Software Metrics, Testing Metrics for Monitoring and Controlling the Testing Process, Efficient Test Suite Management, Testing Process Maturity Models, Introduction to Test Management Tool - Jira | <b>9</b> |
| <b>4</b> | Test Automation: Automation and Testing Tools - Testing For Specialized Environment: Testing Object Oriented Software, Testing Web based Systems, Tracking The Bug: Debugging                                                                   | <b>9</b> |

**Course Assessment Method**  
(CIE: 40 marks, ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| <b>Attendance</b> | <b>Assignment/<br/>Micro project</b> | <b>Internal<br/>Examination-1<br/>(Written)</b> | <b>Internal Examination-<br/>2<br/>(Written)</b> | <b>Total</b> |
|-------------------|--------------------------------------|-------------------------------------------------|--------------------------------------------------|--------------|
| <b>5</b>          | <b>15</b>                            | <b>10</b>                                       | <b>10</b>                                        | <b>40</b>    |

**End Semester Examination Marks (ESE):**

In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions

| <b>Part A</b>                                                                                                                                                           | <b>Part B</b>                                                                                                                                                                                                                                                                          | <b>Total</b> |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|
| <ul style="list-style-type: none"> <li>• 2 Questions from each module.</li> <li>• Total of 8 Questions, each carrying 3 marks</li> </ul> <p><b>(8x3 = 24 marks)</b></p> | <ul style="list-style-type: none"> <li>• Each question carries 9 marks.</li> <li>• Two questions will be given from each module, out of which 1 question should be answered.</li> <li>• Each question can have a maximum of 3 sub divisions.</li> </ul> <p><b>(4x9 = 36 marks)</b></p> | <b>60</b>    |

### Course Outcomes (COs)

At the end of the course students should be able to:

| Course Outcome |                                                                                                                   | Bloom's Knowledge Level (KL) |
|----------------|-------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>CO1</b>     | Explain software testing life cycle (STLC) to ensure comprehensive software quality.                              | <b>K2</b>                    |
| <b>CO2</b>     | Apply various software testing techniques to ensure comprehensive validation and reliability of software systems. | <b>K3</b>                    |
| <b>CO3</b>     | Perform the software testing process effectively to monitor, control, and improve the testing process.            | <b>K3</b>                    |
| <b>CO4</b>     | Apply test automation strategies to effectively test object-oriented software and web-based systems               | <b>K3</b>                    |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

### CO-PO Mapping Table (Mapping of Course Outcomes to Program Outcomes)

## SEMESTER S8

### ADHOC AND WIRELESS SENSOR NETWORKS

|                                        |                             |                    |                |
|----------------------------------------|-----------------------------|--------------------|----------------|
| <b>Course Code</b>                     | <b>PEITT863</b>             | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week (L: T:P: R)</b> | 3:0:0:0                     | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                         | 3                           | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>          | PCITT402: Computer Networks | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. To introduce the fundamental concepts and characteristics of Adhoc networks.
2. To understand the routing protocols and techniques used in Adhoc networks.
3. To explore the architecture and protocols of Wireless Sensor Networks (WSNs).
4. To examine the applications, challenges, and security concerns in Adhoc and Wireless Sensor Networks

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                              | <b>Contact Hours</b> |
|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------|
| <b>1</b>          | Introduction to Adhoc Networks: Definition and Characteristics, Types of Adhoc Networks: MANETs, VANETs, and FANETs, Challenges in Adhoc Networks: Scalability, Mobility, Energy Efficiency, Medium Access Control in Adhoc Networks, Case Studies and Examples.                                         | <b>9</b>             |
| <b>2</b>          | Introduction to Routing in Adhoc Networks, Proactive, Reactive, and Hybrid Routing Protocols, AODV, DSR, OLSR, and TORA Protocols, Quality of Service (QoS) in Adhoc Networks, Performance Analysis of Routing Protocols.                                                                                | <b>9</b>             |
| <b>3</b>          | Introduction to Wireless Sensor Networks: Architecture and Protocols, Sensor Node Architecture and Design, Communication Protocols in WSNs: MAC, Routing, and Transport Layer Protocols, Energy Management in WSNs, WSN Applications in Environmental Monitoring, Healthcare, and Industrial Automation. | <b>9</b>             |
| <b>4</b>          | Key Applications of Adhoc Networks and WSNs, Challenges in Deployment and Maintenance, Security Issues in Adhoc Networks and WSNs: Attacks, Intrusion Detection, Privacy Concerns and Mitigation Techniques, Future Trends and Emerging Technologies in Adhoc and WSNs.                                  | <b>9</b>             |

**Course Assessment Method**  
(CIE: 40 marks, ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| Attendance | Assignment/<br>Microproject | Internal<br>Examination-1<br>(Written) | Internal Examination-<br>2<br>(Written) | Total |
|------------|-----------------------------|----------------------------------------|-----------------------------------------|-------|
| 5          | 15                          | 10                                     | 10                                      | 40    |

**End Semester Examination Marks (ESE):**

In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions

| Part A                                                                                                                                                         | Part B                                                                                                                                                                                                                                                                          | Total |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|
| <ul style="list-style-type: none"> <li>• 2 Questions from each module.</li> <li>• Total of 8 Questions, each carrying 3 marks</li> </ul> <p>(8x3 =24marks)</p> | <ul style="list-style-type: none"> <li>• Each question carries 9 marks.</li> <li>• Two questions will be given from each module, out of which 1 question should be answered.</li> <li>• Each question can have a maximum of 3 sub divisions.</li> </ul> <p>(4x9 = 36 marks)</p> | 60    |

**Course Outcomes (COs)**

At the end of the course students should be able to:

| Course Outcome |                                                                                                   | Bloom's<br>Knowledge<br>Level (KL) |
|----------------|---------------------------------------------------------------------------------------------------|------------------------------------|
| <b>CO1</b>     | Apply the principles of Adhoc networks to design and implement basic network configurations.      | <b>K3</b>                          |
| <b>CO2</b>     | Analyze and implement routing protocols specific to Adhoc networks.                               | <b>K3</b>                          |
| <b>CO3</b>     | Design and evaluate Wireless Sensor Networks for various applications                             | <b>K3</b>                          |
| <b>CO4</b>     | Assess the challenges, applications, and security measures in Adhoc and Wireless Sensor Networks. | <b>K3</b>                          |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

**CO-PO Mapping Table (Mapping of Course Outcomes to Program Outcomes)**

|            | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |

| <b>Credits</b>                         | 3                                      | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>          | PBITT504 - Web Application Development | <b>Course Type</b> | Theory         |

### Course Objectives:

1. To introduce the foundational concepts and architecture of the Semantic Web.
2. To explore RDF and SPARQL as the core technologies for representing and querying data on the Semantic Web.
3. To provide an understanding of Ontology design and the use of OWL for Semantic Web applications.
4. To investigate the practical applications of the Semantic Web and the role of reasoning techniques.

## SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                            | <b>Contact Hours</b> |

**Course Assessment Method**  
(CIE: 40 marks, ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| Attendance | Assignment/<br>Micro project | Internal<br>Examination-1<br>(Written) | Internal Examination- 2<br>(Written) | Total |
|------------|------------------------------|----------------------------------------|--------------------------------------|-------|
| 5          | 15                           | 10                                     | 10                                   | 40    |

**End Semester Examination Marks (ESE):**

In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions

| Part A                                                                                                                                                     | Part B                                                                                                                                                                                                                                                                    | Total |
|------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|
| <ul style="list-style-type: none"> <li>2 Questions from each module.</li> <li>Total of 8 Questions, each carrying 3 marks</li> </ul> <p>(8x3 =24marks)</p> | <ul style="list-style-type: none"> <li>Each question carries 9 marks.</li> <li>Two questions will be given from each module, out of which 1 question should be answered.</li> <li>Each question can have a maximum of 3 sub divisions.</li> </ul> <p>(4x9 = 36 marks)</p> | 60    |

**Course Outcomes (COs)**

At the end of the course students should be able to:

| Course Outcome |                                                                                      | Bloom's Knowledge Level (KL) |
|----------------|--------------------------------------------------------------------------------------|------------------------------|
| CO1            | Apply the principles of the Semantic Web to describe its layered architecture.       | K3                           |
| CO2            | Construct and query RDF data using SPARQL in Semantic Web environments.              | K3                           |
| CO3            | Develop and implement ontologies using OWL for semantic data representation.         | K3                           |
| CO4            | Utilize reasoning techniques in Semantic Web applications to solve complex problems. | K3                           |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

**CO-PO Mapping Table (Mapping of Course Outcomes to Program Outcomes)**

|     | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |
|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|
| CO1 | 3   | 2   | 2   | 2   | 3   | -   | -   | -   | -   | 1    | 1    | 2    |
| CO2 | 3   | 2   | 3   | 3   | 3   | -   | -   | -   | -   | 1    | 2    | 2    |

| <b>Credits</b>                         | 5/3                                                                       | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>          | PCITT501: Machine Learning,<br>PCITT602: Advanced Artificial Intelligence | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. To introduce students to the fundamental concepts and history of robotics, and familiarize them with basic robotic systems and programming.
2. To provide an in-depth understanding of the kinematics and dynamics of robotic systems, and to develop skills in trajectory planning and control.
3. To introduce automation concepts and industrial robots, focusing on their application in modern manufacturing and production systems.
4. To explore advanced topics in robotics and automation, including machine learning, human-robot interaction, and future trends.
5. To develop students' abilities to critically analyze, evaluate, and design complex robotics and automation systems by applying advanced concepts, tools, and frameworks.

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                | <b>Contact Hours</b> |

| 5          | 15                             | 10                        | 10                       | 40    |

## Evaluate and Analyze Level Assessment [20 Marks]

Students should evaluate and analyze a real-world optimization problem, assess the proposed solutions, provide a conclusion on which solution is most appropriate for the problem.

### Criteria for evaluation:

#### 1. Case Study Analysis (K4 - 4 points)

##### Assignment:

- *Provide students with a case study of a real-world robotics or automation system. This could involve a specific robot used in manufacturing, a robotic surgery system, or an automated warehouse system.*
- ***Task:** Ask students to analyze the system by breaking it down into its components (e.g., sensors, actuators, control systems, software). They should evaluate how each component contributes to the overall functionality and how these components interact with each other.*
- ***Expected Output:** A detailed report where students identify key elements, explain their roles, and analyze the strengths and weaknesses of the system's design.*

#### 2. Comparative Evaluation of Robotics Frameworks (K4 – 4 Points)

##### Project:

- *Have students work on a project where they compare two different robotics frameworks or automation tools (e.g., ROS vs. a proprietary robotics framework, or different PLC brands in automation).*
- ***Task:** They should evaluate the frameworks/tools based on criteria such as ease of use, scalability, cost, community support, and performance in specific tasks.*
- ***Expected Output:** A comparative study report or presentation that not only compares the tools but also provides a well-reasoned conclusion about which tool is better suited for particular applications, supported by evidence and critical evaluation.*

#### 3. Design and Critique (K5 - Evaluating)

##### Design Task:

- *Ask students to design a simple robotic system or automation process for a given problem, such as automating a repetitive task in a manufacturing line or designing a robot for a specific healthcare application.*

- **Task:** *Once the design is completed, have them critique their own design by identifying potential weaknesses, risks, and areas for improvement. This self-evaluation should consider factors like efficiency, safety, and cost-effectiveness.*
- **Expected Output:** *A design document with a critical evaluation section where students justify their design choices and propose enhancements based on their evaluation.*

#### 4. Simulation-Based Problem Solving (K5 - 4 points)

##### Lab Task:

- *Use a robotics simulation software (e.g., Gazebo with ROS) where students are given a scenario with specific goals (e.g., navigate an environment, complete a task).*
- **Task:** *Students must analyze the problem, develop a solution within the simulation environment, and then evaluate the effectiveness of their solution, including how they could optimize the process or improve performance.*
- **Expected Output:** *A simulation report or demonstration video, accompanied by an analysis of the performance and a critique of the solution, with suggestions for improvements.*

#### 5. Peer Review (K4- 2 points, K5 – 2 points)

##### Activity:

- *Organize a peer review session where students present their projects to their peers. Each student group reviews another group's project, analyzing its strengths and weaknesses.*
- **Task:** *Students must provide constructive feedback and evaluate the feasibility and effectiveness of the approach taken by their peers, based on criteria such as technical soundness, innovation, and potential for real-world application.*
- **Expected Output:** *Written feedback and evaluation reports from peers (K4), followed by a discussion where students defend their design decisions based on the critiques received (K5).*

**Scoring:**

1. **Accomplished (4 points):** Exceptional analysis, clear implementation, and depth of understanding.
2. **Competent (3 points):** Solid performance with minor areas for improvement.
3. **Developing (2 points):** Adequate effort but lacks depth or clarity.
4. **Minimal (1 point):** Incomplete or significantly flawed.

**End Semester Examination Marks (ESE):**

In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions

| Part A                                                                                                                                                         | Part B                                                                                                                                                                                                                                                                          | Total            |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|
| <ul style="list-style-type: none"> <li>• 2 Questions from each module.</li> <li>• Total of 8 Questions, each carrying 3 marks</li> </ul> <p>(8x3 =24marks)</p> | <ul style="list-style-type: none"> <li>• Each question carries 9 marks.</li> <li>• Two questions will be given from each module, out of which 1 question should be answered.</li> <li>• Each question can have a maximum of 3 sub divisions.</li> </ul> <p>(4x9 = 36 marks)</p> | <p><b>60</b></p> |

**Course Outcomes (COs)**

At the end of the course students should be able to:

| Course Outcome |                                                                                                                      | Bloom's Knowledge Level (KL) |
|----------------|----------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>CO1</b>     | Apply basic principles of robotics to program and simulate simple robotic tasks.                                     | <b>K3</b>                    |
| <b>CO2</b>     | Apply kinematic and dynamic models to design and control robotic manipulators.                                       | <b>K3</b>                    |
| <b>CO3</b>     | Implement automation systems using industrial robots, PLCs, and SCADA systems.                                       | <b>K3</b>                    |
| <b>CO4</b>     | Apply advanced techniques in robotics and automation to develop innovative solutions in emerging areas.              | <b>K3</b>                    |
| <b>CO5</b>     | Critically evaluate and optimize robotics and automation systems by analyzing their design, performance, and impact. | <b>K5</b>                    |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

**CO-PO Mapping Table (Mapping of Course Outcomes to Program Outcomes)**

|            | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |

**Course Outcomes (COs)**

At the end of the course students should be able to:

| Course Outcome |                                                                                                                       | Bloom's Knowledge Level (KL) |
|----------------|-----------------------------------------------------------------------------------------------------------------------|------------------------------|
| <b>CO1</b>     | Implement fundamental image processing techniques required for computer vision                                        | <b>K3</b>                    |
| <b>CO2</b>     | Describe various geometric techniques in computer vision                                                              | <b>K2</b>                    |
| <b>CO3</b>     | Illustrate various feature descriptors and image matching algorithms used in computer vision                          | <b>K3</b>                    |
| <b>CO4</b>     | Explain various applications of computer vision that use motion tracking, object detection and recognition techniques | <b>K2</b>                    |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

### CO-PO Mapping Table (Mapping of Course Outcomes to Program Outcomes)

|            | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |
|------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|
| <b>CO1</b> | 3   | 2   |     |     |     |     |     |     |     |      |      |      |
| <b>CO2</b> | 3   | 2   |     |     |     |     |     |     |     |      |      |      |
| <b>CO3</b> | 3   | 2   | 2   |     |     |     |     |     |     |      |      |      |
| <b>CO4</b> | 3   | 2   | 2   |     |     |     |     |     |     |      |      |      |

Note: 1: Slight (Low), 2: Moderate (Medium), 3: Substantial (High), -: No Correlation

| Text Books |                                            |                      |                        |                      |

## SEMESTER S8

### DEEP LEARNING

|                                        |                 |                    |                |
|----------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                     | <b>OEITT832</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week (L: T:P: R)</b> | 3:0:0:0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                         | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>          | OEITT721        | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. To provide students the understanding of deep learning principles and neural network architectures.
2. To enable students to explore generative models and transfer learning, the latest trends in deep learning.

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                   | <b>Contact Hours (36 Hrs)</b> |
|-------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------|
| <b>1</b>          | <b>Introduction to Deep Learning:</b> Traditional Machine Learning to Deep Learning, Neural Networks- Feedforward Neural Networks, Activation Functions -Sigmoid, ReLU, Tanh, Softmax, Training Neural Networks- Forward and Backward Propagation Algorithm, Optimization Algorithms (Gradient Descent, Stochastic Gradient Descent, Adam).                   | <b>9</b>                      |
| <b>2</b>          | <b>Convolutional Neural Networks (CNNs):</b> CNN Basics- Convolutional Layers, Pooling Layers, CNN Architectures- LeNet, AlexNet, VGG, ResNet, Applications of CNNs.                                                                                                                                                                                          | <b>8</b>                      |
| <b>3</b>          | <b>Recurrent Neural Networks (RNNs) and Transformers:</b> RNN Basics- RNN Structure, Backpropagation Through Time (BPTT), Vanishing and Exploding Gradients, Advanced RNN Architectures- Long Short-Term Memory (LSTM), Gated Recurrent Units (GRU), Transformers and Attention Mechanisms- Attention Mechanism Basics, Transformer Architecture (BERT, GPT). | <b>11</b>                     |
| <b>4</b>          | <b>Generative Models and Transfer Learning:</b> Generative Adversarial Networks (GANs)- GAN Basics, Applications of GANs, Autoencoders- Architecture, Transfer Learning and Fine-Tuning- Pre-trained Models, Fine-Tuning Strategies.                                                                                                                          | <b>8</b>                      |

**Course Assessment Method**  
(CIE: 40 marks, ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| Attendance | Assignment/<br>Microproject | Internal<br>Examination-1<br>(Written) | Internal Examination- 2<br>(Written) | Total |
|------------|-----------------------------|----------------------------------------|--------------------------------------|-------|
| 5          | 15                          | 10                                     | 10                                   | 40    |

**End Semester Examination Marks (ESE):**

In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions

| Part A                                                                                                                                                                                 | Part B                                                                                                                                                                                                                                                                                                | Total     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| <ul style="list-style-type: none"> <li>2 Questions from each module.</li> <li>Total of 8 Questions, each carrying 3 marks</li> </ul> <p style="text-align: center;">(8x3 =24marks)</p> | <ul style="list-style-type: none"> <li>Each question carries 9 marks.</li> <li>Two questions will be given from each module, out of which 1 question should be answered.</li> <li>Each question can have a maximum of 3 sub divisions.</li> </ul> <p style="text-align: center;">(4x9 = 36 marks)</p> | <b>60</b> |

**Course Outcomes (COs)**

At the end of the course students should be able to:

| Course Outcome |                                                                                                       | Bloom's<br>Knowledge<br>Level (KL) |
|----------------|-------------------------------------------------------------------------------------------------------|------------------------------------|
| <b>CO1</b>     | Build basic Neural Network models using appropriate activation functions and optimization techniques. | <b>K3</b>                          |
| <b>CO2</b>     | Apply Convolutional Neural Networks and their architectures to various tasks.                         | <b>K3</b>                          |
| <b>CO3</b>     | Develop Recurrent Neural Networks and Transformer models.                                             | <b>K3</b>                          |
| <b>CO4</b>     | Explain the principles of Generative Adversarial Networks and Autoencoders.                           | <b>K2</b>                          |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

**CO-PO Mapping Table (Mapping of Course Outcomes to Program Outcomes)**

|            | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |
|------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|

## SEMESTER S8

### WEB DESIGNING

|                                        |                 |                    |                |
|----------------------------------------|-----------------|--------------------|----------------|
| <b>Course Code</b>                     | <b>OEITT833</b> | <b>CIE Marks</b>   | 40             |
| <b>Teaching Hours/Week (L: T:P: R)</b> | 3:0:0:0         | <b>ESE Marks</b>   | 60             |
| <b>Credits</b>                         | 3               | <b>Exam Hours</b>  | 2 Hrs. 30 Min. |
| <b>Prerequisites (if any)</b>          | None            | <b>Course Type</b> | Theory         |

#### Course Objectives:

1. Gain a comprehensive understanding of web development, from structuring and styling web pages with HTML and CSS to adding interactivity with JavaScript and jQuery, and understanding server interactions and web hosting.

### SYLLABUS

| <b>Module No.</b> | <b>Syllabus Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            | <b>Contact Hours</b> |

|----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
|          | breakpoints, designing responsively, Transition, Transforms, and Animations: CSS transitions, CSS transforms, Keyframe animations                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |           |
| <b>3</b> | <p><b>Introduction to JavaScript:</b> JavaScript, Adding JavaScript to a page, the anatomy of a script, the browser object, Events, putting it all together, Meet the DOM, Polyfills, JavaScript libraries</p> <p><b>jQuery:</b> jQuery, A basic jQuery example, jQuery use, finding elements, jQuery selection, Getting element content, Updating elements, Changing content, Inserting elements, Adding new content, Getting and setting attributes, Getting and setting CSS properties, Using .each(), events, The event object, Effects, Animating CSS properties, Using animation, traversing the DOM, Working with forms, JavaScript libraries, jQuery and Ajax.</p> | <b>10</b> |
| <b>4</b> | <p>Introduction to XML: syntax, element, attribute, HttpRequest SVG: Drawing with XML, Features of SVG as XML, SVG tools, SVG production tips, Responsive SVG.</p> <p>Web Servers: Introduction, HTTP Transactions, Multitier Application Architecture, Client-Side Scripting versus Server-Side Scripting, Accessing Web Servers. Introduction to Web Publishing or Hosting.</p>                                                                                                                                                                                                                                                                                          | <b>8</b>  |

**Course Assessment Method**  
(CIE: 40 marks, ESE: 60 marks)

**Continuous Internal Evaluation Marks (CIE):**

| <b>Attendance</b> | <b>Assignment/<br/>Microproject</b> | <b>Internal<br/>Examination-1<br/>(Written)</b> | <b>Internal Examination-<br/>2<br/>(Written)</b> | <b>Total</b> |
|-------------------|-------------------------------------|-------------------------------------------------|--------------------------------------------------|--------------|
| <b>5</b>          | <b>15</b>                           | <b>10</b>                                       | <b>10</b>                                        | <b>40</b>    |

### End Semester Examination Marks (ESE):

In Part A, all questions need to be answered and in Part B, each student can choose any one full question out of two questions

| Part A                                                                                                                                                      | Part B                                                                                                                                                                                                                                                                      | Total     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| <ul style="list-style-type: none"><li>• 2 Questions from each module.</li><li>• Total of 8 Questions, each carrying 3 marks</li></ul> <p>(8x3 =24marks)</p> | <ul style="list-style-type: none"><li>• Each question carries 9 marks.</li><li>• Two questions will be given from each module, out of which 1 question should be answered.</li><li>• Each question can have a maximum of 3 sub-divisions.</li></ul> <p>(4x9 = 36 marks)</p> | <b>60</b> |

### Course Outcomes (COs)

At the end of the course, students should be able to:

| Course Outcome |                                                     | Bloom's Knowledge Level (KL) |
|----------------|-----------------------------------------------------|------------------------------|
| CO1            | Summarise HTML tags.                                | K2                           |
| CO2            | Apply CSS to add presentation style to web pages.   | K3                           |
| CO3            | Apply JavaScript to add functionality to web pages. | K3                           |
| CO4            | Understand the basics of XML, SVG, and web servers. | K2                           |

Note: K1- Remember, K2- Understand, K3- Apply, K4- Analyse, K5- Evaluate, K6- Create

### CO-PO Mapping Table (Mapping of Course Outcomes to Program Outcomes)

|     | PO1 | PO2 | PO3 | PO4 | PO5 | PO6 | PO7 | PO8 | PO9 | PO10 | PO11 | PO12 |
|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|
| CO1 | 3   | 2   | 1   | -   | 3   | -   | -   | -   | 2   | -    | -    | 2    |
| CO2 | 3   | 2   | 2   | -   | 3   | -   | -   | -   | 2   | -    | -    |      |
| CO3 | 3   | 2   | 3   | -   | 3   | -   | -   | -   | 2   | -    | -    |      |
| CO4 | 3   | 2   | 2   | -   | 3   | -   | -   | -   | 2   | -    | -    |      |

Note: 1: Slight (Low), 2: Moderate (Medium), 3: Substantial (High), -: No Correlation
